Simulink as the design editor, because it is common to system designers and its discrete-time computation model can be made bit-true and cycle-accurate with respect to the hardware. This approach provides a common description of the algorithm and ASIC. It merges design, optimization, and ASIC hardware verification steps within the widely adopted

An Application-Specific Integrated Circuit (ASIC / ˈæpˌlɪkəˈʃən spɪˈsɪfɪk ɪntɪˈɡreɪtɪd ˈsɪkəl /) is an integrated circuit (IC) customized for a particular use, rather than intended for general-purpose use. For example, a chip designed to run in a digital voice recorder or a high-efficiency Bitcoin miner is an ASIC.
