In this study, a comprehensive investigation is carried out to study the effectiveness of model-based predictive control strategies to solve a formidable automotive control problem, that is, reducing the amount of cumulative hydrocarbon (HC) tailpipe emissions or HC cum over the first few minutes of an

Predictive Control Strategies for Automotive Engine

Model-based predictive control is a relatively new method in control engineering. The basic idea of the method is to consider and optimize the relevant variables, not only at the current time point but also during their course in the future.

1 Introduction to Predictive Control - Wiley-VCH

The term Model Predictive Control does not designate a specific control strategy but rather an ample range of control methods which make explicit use of a model of the process to obtain the ...

the high computational burden is a drawback for practical implementations. In [5] it was shown for the side-wind rejection scenario how to lower this burden by using simplified

Hybrid Parameter-varying Model Predictive Control for

Overview of Model Predictive Control. 415. A block diagram of a model predictive control system is shown in

Fig. 20.1. A process model is used to predict the current values of the output variables. The residuals, the differences between the actual and pre-dicted outputs, serve as the feedback signal to a . Predic-tion. block.

1 Model Predictive Control in Automotive Applications 495 MPC [6] that synthesizes the control law, and hence avoids the need to run an op-timization algorithm online in the micro-controller.

Automotive Applications of Model Predictive Control

Keywords: Nonlinear Model Predictive Control, Active Steering, Autonomous Systems 1. INTRODUCTION Recent trends in automotive industry point in the direction of increased content of electron-ics, computers, and controls with emphasis on the improved functionality and overall system robustness. Many advanced sensors and infras-

Model predictive control (MPC) is an advanced method of process control that is used to control a process while satisfying a set of constraints. It has been in use in the process industries in chemical plants and oil refineries since the 1980s.
