biodiversity concept conservation and pdf

Edit Text: Conservation International was a pioneer in defining and promoting the concept of hotspots. In 1989, just one year after scientist Norman Myers wrote the paper that introduced the hotspots concept, CI adopted the idea of protecting these incredible places as the guiding principle of our investments.

Why Hotspots Matter - Conservation International

A biodiversity hotspot is a biogeographic region with significant levels of biodiversity that is threatened with destruction. For example forests are considered as biodiversity hotspots. The Status is designated by Conservation International. Norman Myers wrote about the concept in two articles in "The Environmentalist― (1988), & 1990 revised after thorough analysis by Myers and others ...

Marine conservation refers to the study of conserving physical and biological marine resources and ecosystem functions. It is the protection and preservation of ecosystems in oceans and seas through planned management in order to prevent the exploitation of these resources. Marine conservation is driven by the manifested negative effects being seen in our environment such as species loss ...

Barlow: Rewilding is a concept that works with restoration ecology and evolution combined. One type of rewilding deals with restoring lost biodiversity. Restoration ecology is when you look at a landscape and ask how we can bring it back to conditions that are more natural, say, before Europeans arrived in North America.
