Talk slides not corresponding to papers (mostly expository): The diamond lemma and its applications (May 2018, Student Combinatorics Seminar, UMN Minneapolis). Sourcecode. This is an exposition of Newman's diamond lemma, with (an outline of a) constructive proof and a few applications (including a glimpse at Gröbner bases).

The set  $H$  of all quaternions is a vector space over the real numbers with dimension 4. (In comparison, the real numbers have dimension 1, the complex numbers have dimension 2, and the octonions have dimension 8.) Multiplication of quaternions is associative and distributes over vector addition, but it is not commutative.

### **Quaternion - Wikipedia**

Algebra can essentially be considered as doing computations similar to those of arithmetic but with non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra belongs to the theory of equations and is not, nowadays, considered as belonging to algebra (in fact, every proof must use ...

The extended Kalman filter is the standard tool to estimate in real time the current state of a dynamical system based on noisy measurements of a part of the system, used for instance in GPS navigation.
