Single-photon emission computed tomography (SPECT, or less commonly, SPET) is a nuclear medicine tomographic imaging technique using gamma rays. It is very similar to conventional nuclear medicine planar imaging using a gamma camera (that is, scintigraphy). but is able to provide true 3D information. This information is typically presented as cross-sectional slices through the patient, but can ...

A CT scan, also known as computed tomography scan, and formerly known as a computerized axial tomography scan or CAT scan, makes use of computer-processed combinations of many X-ray measurements taken from different angles to produce cross-sectional (tomographic) images (virtual "slices") of specific areas of a scanned object, allowing the user to see inside the object without cutting.

1. Introduction. X-ray computed tomography (CT) is becoming increasingly important among the non-destructive inspection techniques for applications where the three-dimensional (3D) nature of the phenomena is important, or where the evolution of critical features is of interest, either during manufacturing or under in-service conditions.
