Summary. A little over 50 years ago, Sydney Brenner had the foresight to develop the nematode (round worm) *Caenorhabditis elegans* as a genetic model for understanding questions of developmental biology and neurobiology. Over time, research on *C. elegans* has expanded to explore a wealth of diverse areas in modern biology including studies of the basic functions and interactions of eukaryotic ...

Obtaining information of species, populations and communities by retrieving DNA from environmental samples (environmental DNA – eDNA) holds the potential of combating many of these challenges associated with biodiversity monitoring (Baird and Hajibabaei, 2012, Kelly et al., 2014b). The fact that DNA from higher organisms persists in the environment, where it can be sampled, extracted and ...
