Fluid mechanics involves many of the same principles of solid statics and dynamics, but fluids is a more complex subject because solids involve the study of forces on discrete bodies, while in fluid bodies flow together.

Fluid mechanics is the branch of classical physics and mathematics concerned with the response of matter that continuously deforms (flows) when subjected to a shear stress. The subject can be divided into fluid statics - the study of fluids at rest, and fluid dynamics - the study of the effect of forces on fluid motion.
