

human gene mapping 7 pdf

Gene mapping "Gene mapping" refers to the mapping of genes to specific locations on chromosomes. It is a critical step in the understanding of genetic diseases. There are two types of gene mapping: Genetic Mapping - using linkage analysis to determine the relative position between two genes on a chromosome.

chapter 13-human gene mapping - Shandong University

Human Gene Mapping 7: Cytogenetics and Cell Genetics

Gene Mapping Techniques OBJECTIVES By the end of this session the student should be able to:
 Define genetic linkage and recombinant frequency
 State how genetic distance may be estimated
 State how restriction enzymes can be used for isolating genes
 Define Restriction Fragment Length Polymorphisms (RFLPs)
 Identify the main applications of RFLPs in gene mapping and carrier

assignment of the corresponding gene to be made. Approximately 130 genes coding for enzymes have been mapped to particular human chromosomes, including at least one example for each, excepting the Y-chromosome 8. Use of somatic cell hybrids for gene mapping requires accurate identification of their human genetic contribution.

Mapping the human genome by somatic cell genetics

CHAPTER7 Extending Mendelian Genetics KEY CONCEPTS 7.1 Chromosomes and Phenotype The chromosomes on which genes are located can affect the expression of traits. 7.2 Complex Patterns of Inheritance Phenotype is affected by many different factors. 7.3 Gene Linkage and Mapping Genes can be mapped to specific locations on chromosomes.
