

### **ilp based path analysis pdf**

ILP-based path analysis (see [11]) generates an objective function and a set of constraints. Loops in the call graph pose a problem, because the structure of the original call graph

### **ILP-Based Program Path Analysis for Bounding Worst-Case**

Abstract. Program analysis usually works on control flow graphs (CFGs) and on a call graph (CG). The standard CGs contain one node for each function, but for precise analyses, it may be desirable to distinguish function invocations by their execution history.

A large number of algorithms have been proposed which analyze worst-case cache flush cost based on static path analysis [4,5,6,7, 8] or based on even simpler analysis [9,10,11]. ...

### **ILP-Based Program Path Analysis for Bounding Worst-Case**

Timing analysis can be split into two steps: a) the analysis of the behaviour of the hardware components, b) finding the worst-case path. A novel approach to path analysis is described in this thesis that introduces sophisticated interprocedural analysis techniques that were not available before.

### **ILP-based Interprocedural Path Analysis**

These bounds, together with the results of the control-flow analysis are then used in path analysis [20, 21] to determine an upper bound on the execution time of the program as a whole.

A fast path-based ILP formulation for offline RWA in mesh optical networks Abstract: RWA is a fundamental problem in the design and control of optical networks. We introduce the concept of symmetric RWA solutions and present a new ILP formulation to construct optimally such solutions.

path analysis. Were we to decide that not only does high SES cause high nAch but that also high nAch causes high SES, we could not use path analysis. For each path to an endogenous variable we shall compute a path coefficient,  $p_{ij}$ , where "i" indicates the effect and "j" the cause. If we square a path coefficient we get

We have developed a new timing abstraction model for digital circuit blocks that is stimulus independent, port based, supports designs with level triggered latches, and can be input into commercial STA (Static Timing Analysis) tools.

ILP-based joint routing and scheduling for time-triggered networks. Full Text: PDF ... it is possible to solve various scheduling problems that are infeasible when using a fixed shortest path routing with separate scheduling. ... Despite various analysis models and tests proposed by the real-time community to validate the temporal performance ...

### **ILP-based joint routing and scheduling for time-triggered**

Our ILP based solution is flexible enough to include new constraints and objectives to better serve this challenging scenario. In order to test this hypothesis a simulated metagenomic dataset was created utilizing the staph and rhodo genomes from the GAGE dataset.
