

### **molecular cloning a laboratory pdf**

Cloning is the process of producing genetically identical individuals of an organism either naturally or artificially. In nature, many organisms produce clones through asexual reproduction. Cloning in biotechnology refers to the process of creating clones of organisms or copies of cells or DNA fragments (molecular cloning). Beyond biology, the term refers to the production of multiple copies of ...

### **Cloning - Wikipedia**

In molecular cloning, a vector is a DNA molecule used as a vehicle to artificially carry foreign genetic material into another cell, where it can be replicated and/or expressed (e.g.- plasmid, cosmid, Lambda phages). A vector containing foreign DNA is termed recombinant DNA. The four major types of vectors are plasmids, viral vectors, cosmids, and artificial chromosomes.

Today, it is difficult to imagine a time when our laboratory freezers were not well stocked with restriction enzymes, when DNA sequencing was not possible, or when genes were only accessible to the geneticists and could not be simply cloned out by recombinant DNA technology. Yet, in December 1971, a key paper appeared in PNAS that set the stage for much of what is now routine ( 1).

Overview of JBC's publication process. For initial submission, authors should prepare their manuscript as a single PDF file. At this stage, the primary goal is for the manuscript to contain the necessary information to enable a full scientific assessment, so while all sections of the manuscript need to be present, references need to be complete, and figures and tables need to be clearly ...
