4.1. Content-based filtering. Content-based technique is a domain-dependent algorithm and it emphasizes more on the analysis of the attributes of items in order to generate predictions.

Recommendation systems: Principles, methods and evaluation

Bridge the gap between a high-level understanding of how an algorithm works and knowing the nuts and bolts to tune your models better. This book will give you the confidence and skills when developing all the major machine learning models.

(in)Security in Building Automation: How to Create Dark Buildings with Light Speed. A number of talks in the last few years have addressed various topics in the generic area of industrial control system insecurity but only few have tapped into security of building automation systems, albeit its prevalence.

Artificial neural networks (ANNs) or connectionist systems are computing systems inspired by the biological neural networks that constitute animal brains. Such systems learn (progressively improve their ability) to do tasks by considering examples, generally without task-specific programming.

A simple and surprisingly effective family of conditioning mechanisms. Visual question-answering +. Perez et al. use FiLM layers to build a visual reasoning model trained on the CLEVR dataset to answer multi-step, compositional questions about synthetic images. The linguistic pipeline acts as the FiLM generator. FiLM layers in each residual block modulate the visual pipeline.
